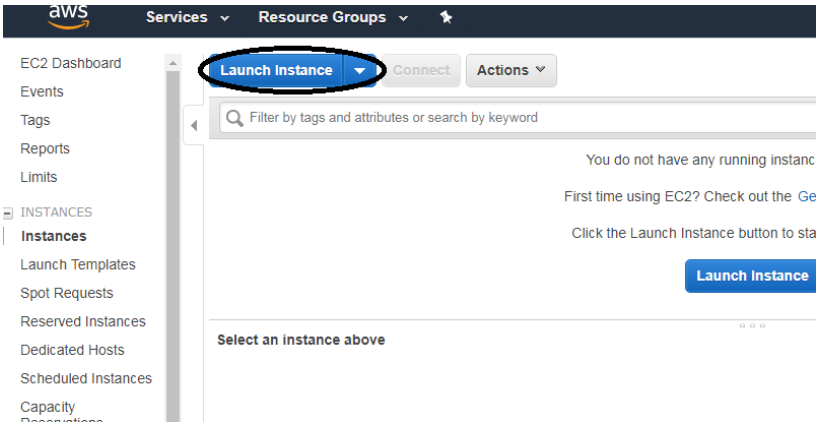
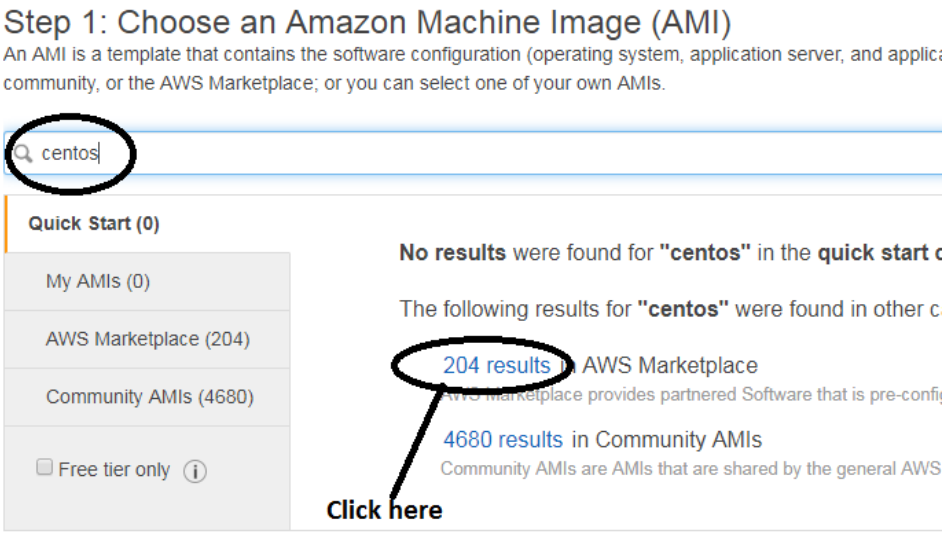
Lab manual – Jenkins – Installation on AWS EC2

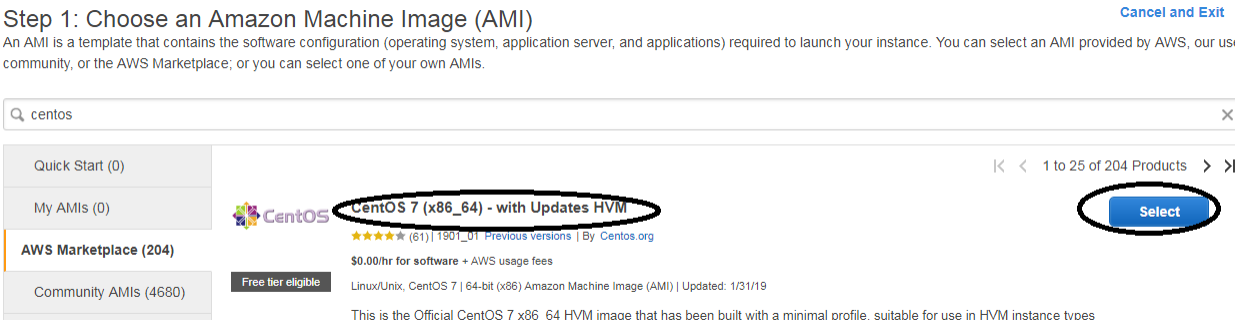
Step1:

Login to AWS and create a EC2 instance with “Centos” as an image



Click on “Launch Instance” under EC2 services.





Select **“Centos 7”** and click **“Select”**

CentOS 7 (x86_64) - with Updates HVM

Free tier eligible

CentOS 7 (x86_64) - with Updates HVM

This is the Official CentOS 7 x86_64 HVM image that has been built with a minimal profile, suitable for use in HVM instance types only. The image contains just enough packages to run within AWS, bring up an SSH Server and allow users to login. Please note that this is the default CentOS-7 image that we recommend everyone uses. It contains ...

Product Details

By	Centos.org
Customer Rating	★★★★★ (61)
Latest Version	1901_01
Base Operating System	Linux/Unix, CentOS 7
Delivery Method	64-bit (x86) Amazon Machine Image (AMI)
License Agreement	End User License Agreement
On Marketplace Since	10/6/14

Highlights

- All official CentOS Linux images are built with SELINUX set to enforcing mode. However, we test the images with both Selinux enabled as well as permissive.
- Starting with CentOS-7 we now include cloud-init support in all CentOS AMI's, the

Pricing Details

Hourly Fees

Instance Type	Software	EC2	Total
t2.nano	$0.00	$0.006	$0.006/hr
t2.micro	$0.00	$0.012	$0.012/hr
t2.small	$0.00	$0.023	$0.023/hr
t2.medium	$0.00	$0.046	$0.046/hr
t2.large	$0.00	$0.093	$0.093/hr
t2.xlarge	$0.00	$0.186	$0.186/hr

Step 2: Choose an Instance Type

Amazon EC2 provides a wide selection of instance types optimized to fit different use cases. Instances are virtual servers that can run applicatic storage, and networking capacity, and give you the flexibility to choose the appropriate mix of resources for your applications. Learn more abou needs.

Filter by: All instance types | Current generation | Show/Hide Columns

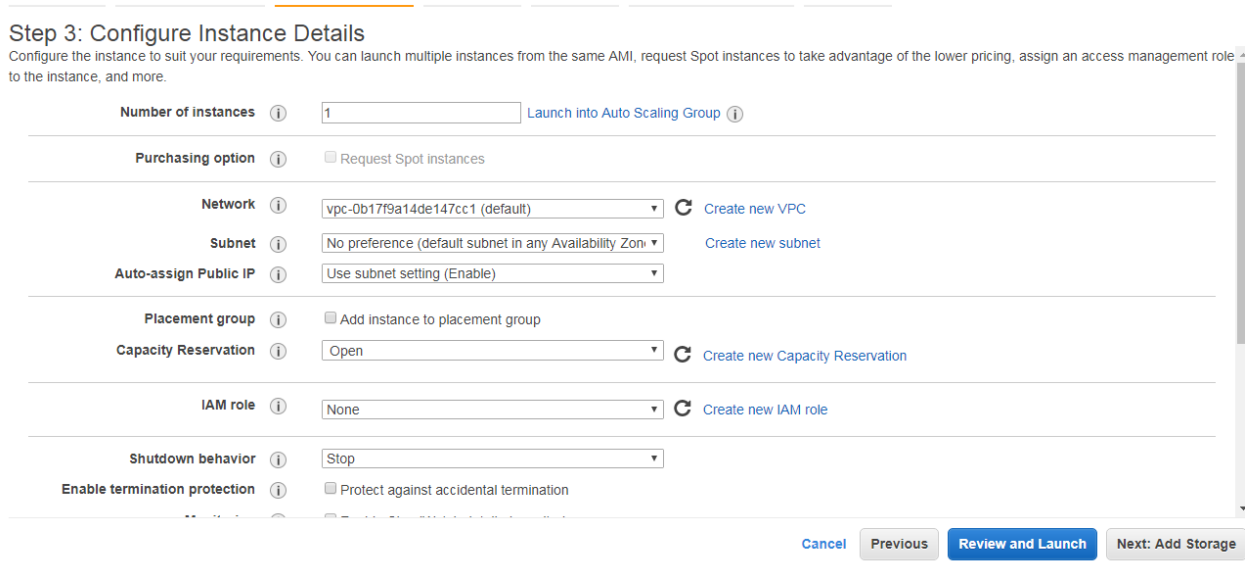
Currently selected: t2.micro (Variable ECUs, 1 vCPUs, 2.5 GHz, Intel Xeon Family, 1 GiB memory, EBS only)

Note: The vendor recommends using a **t2.micro** instance (or larger) for the best experience with this product.

	Family	Type	vCPUs	Memory (GiB)	Instance Storage (GB)	EBS-Op Availab
☐	General purpose	t2.nano	1	0.5	EBS only	-
☑	General purpose	t2.micro Free tier eligible	1	1	EBS only	-
☐	General purpose	t2.small	1	2	EBS only	-

Let the default instance type be selected.

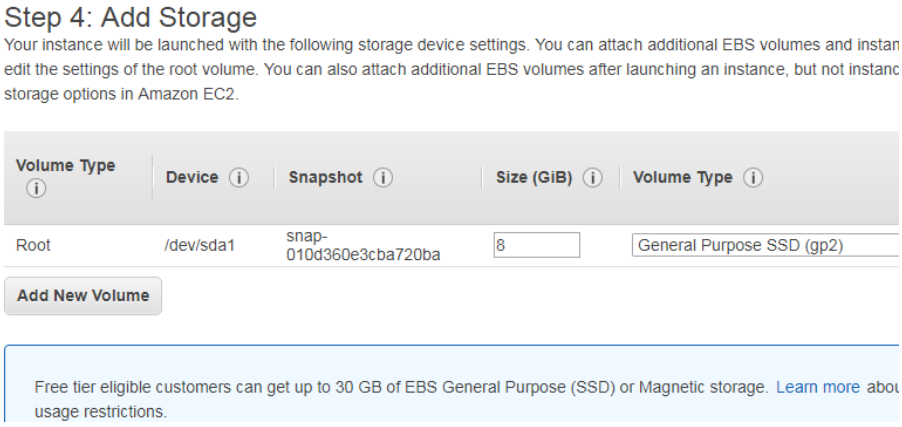
Click on "**Next: Configure instance details**".



Here let the default VPC be selected, as we don't need to be worried about it.

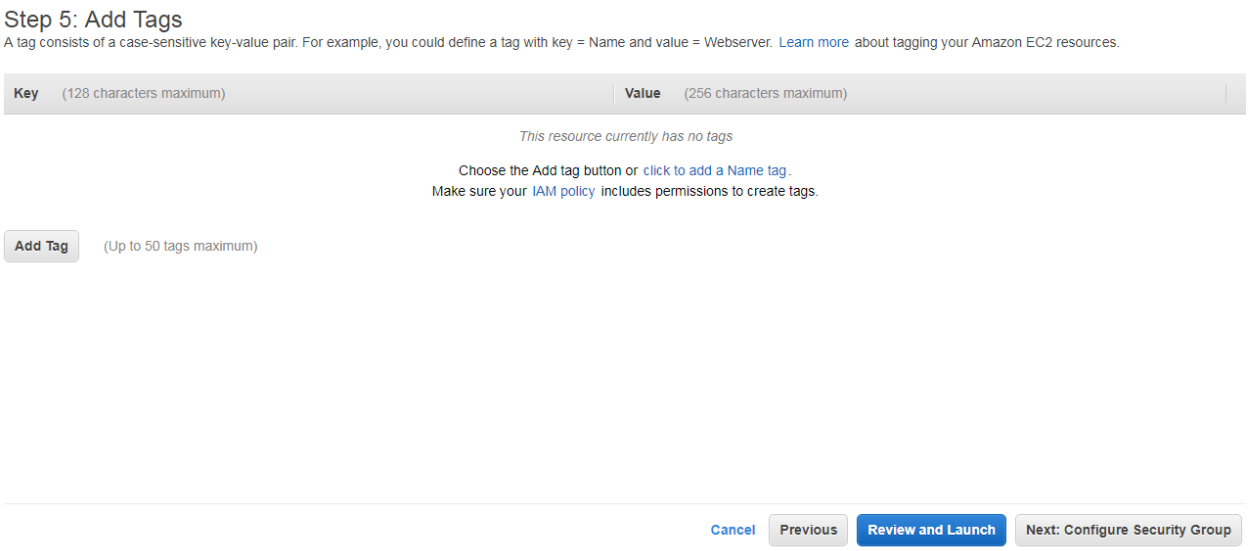
We basically need the Jenkins up and running and it should be accessible from the internet.

Click on **"Next: Add storage"**

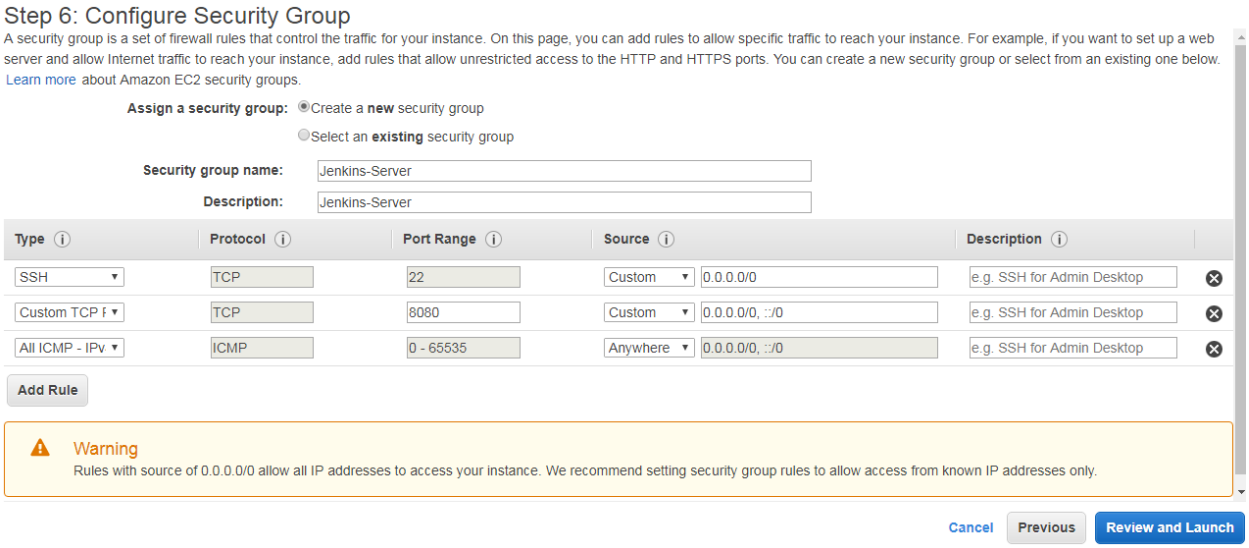


No changes on this page, as default "8 GB" is enough for the jenkins setup and working.

Click **"Next:"**



Click on **"Next: Configure Security Group"**



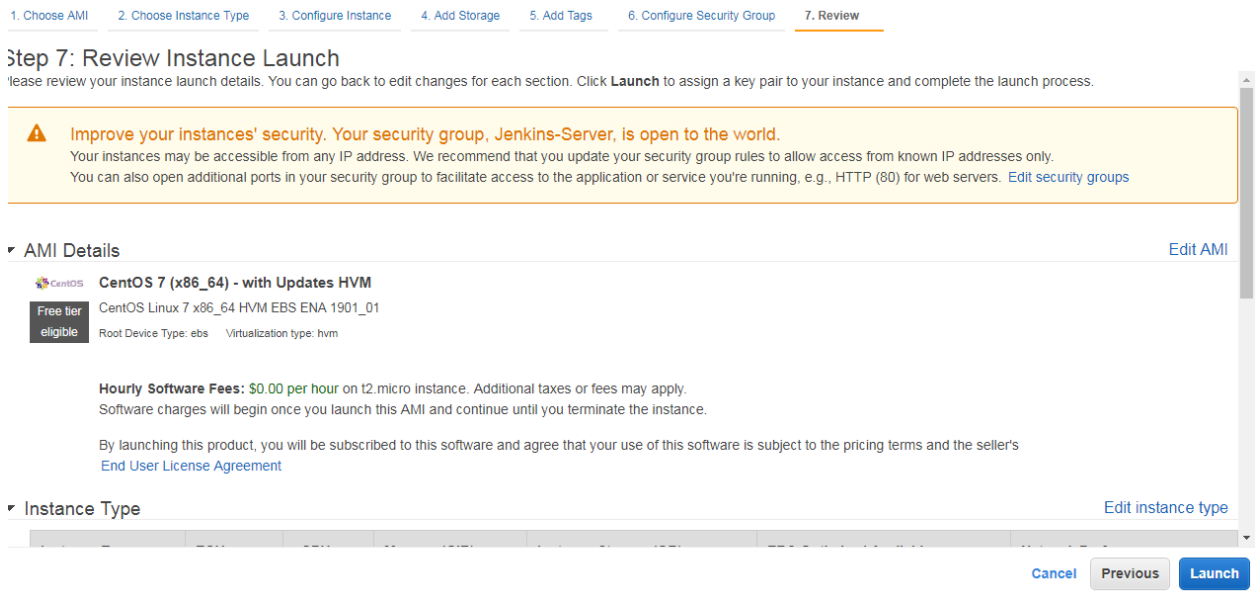
Here in an important step.

Make sure the custom port "8080" for tcp is added, as Jenkins works on that port.

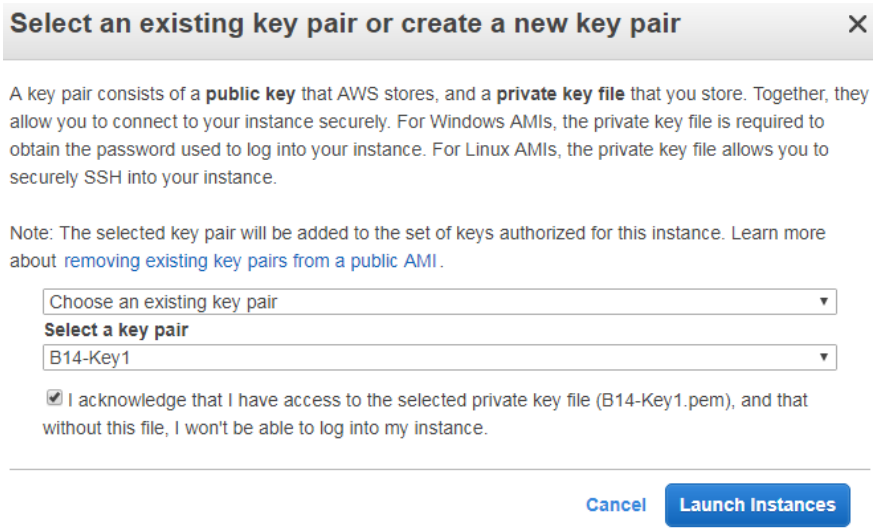
Also we would need port "22" for remote access as it is an centos.

"ICMP" is allowed to check if the EC2 instance is up or not.

Click "Review and Launch"



Click on **"Launch".**



Select the right key pair,

There would be an key pair that would be generated and you need to download the private key and keep it safe.

Then Click on "Launch Instance".

Now , use the public ip of the instance to login to the instance (SSH), to continue with the Jenkins installation.
